

Access to

SBE BattleWeb has been designed jointly by Army Field Support Command (AFSC) and U.S. Army Forces Command (FORSCOM) as a flexible logistics and mission planning tool. It provides real-time Internet access to critical information pertaining to Stay-Behind Equipment (SBE) stocks for pre-deployment planning. It is designed for deploying units to plan short and long term deployment scenarios and “what ifs” utilizing SBE stocks. SBE BattleWeb offers the core functionality of the Deployment Asset Visibility System (DAVS) and Automated Battlebook System (ABS). It is a key tool in the Army’s goal of Force Projection in the SBE mission.
